H Ex. 6 PP / Ex. 7(C)

Thought you might need more on this question.

Ex. 5 Deliberative Process (DP)

Then there's waste characterization for all the waste streams. Ex. 5 Deliberative Process (DP)
have seen a lot of formal laboratory analytical reports on this, probably more.

Then there's site stabilization, given the hazards. That work for a full month, merging into waste repackaging and hazardous waste management on site, Ex. 5 Deliberative Process (DP) or the moon-suited crew fairly easily.

LIT Industrial, the property owner, will pay ~\$34,000 in hazardous waste generator fees.

Ex. 5 Deliberative Process (DP)

Ex. 5 Deliberative Process (DP)

Hope this helps!

I had already requested a total cost from LIT Industrial. I have not heard back. I noted that DEQ would like this amount to consider for inclusion as Economic Benefit in our case against SoloPower Systems Inc.

Jay

Thank you, Jon. Great News!

I look forward to receiving the final records completing all manifests, LDR forms, CHES HAZCAT and laboratory analyses.

Jay

Jay: Removal of hazardous substances stored by SoloPower Systems, Inc. (Solopower) at its former tenant space at 6308-6310 North Marine Drive, Portland, OR 97203, was completed under manifest yesterday morning, 22 January 2019.

I will be in town through Friday this week, if you or another of the ODEQ hazardous waste inspection group would like to do a quick walkthrough with me to complement Nick's observations.

Subject: RE: Solopower Cleanup

Thank you, Nick. Great news!

This is consistent with my findings of 1/17/2019. They had a few totes and several drums of waste, largely hazardous, to go off in the intervening days. Followed by the Evoqua filters pending pickup by that supplier.

We have extensive photo documentation of how the facility was found and how it progressed over two follow-up inspections, if you need it.

Thank you for the promise of the inspection report and photolog. DEQ has a firewall for emails totaling over 10 MB, so you might check the file size before sending.

Thanks again!

Jay

Subject: Solopower Cleanup

Hi Jay,

I met with (Tetra Tech) at the Solopower site yesterday. I will send you my notes and photos from the inspection once I compile them into a legible document. For the time being I wanted to send you a quick update on my findings. I did not observe any stored waste, used and un-used chemicals, and untreated wastewater during my inspection, it appears to be all gone. We inspected the main production floor, the pretreatment/wastewater room, the VOC room/lab (glycol ether removed), Cadmium Sulfate room, and the plating room. There are several storage tanks in the wastewater room that are still standing but are emptied out.

Clean Harbors is finished with the main cleanup project; however they plan to return to clean the floor where equipment is currently sitting (once it is sold off). Additionally, they have some of their own storage tanks (all dry) to pick up. Wastewater tanks at the facility are going to be sold off, if there is no buyer they will be junked. There are a few Evoqua filters in the plating room that the manufacturer will pick up. mentioned he has a few manifests for materials removed 1/22/2019 that he will send you by the end of the week.

That is all I have for now. I try to send my report along with photos tomorrow. As far as the City is concerned we have enough documentation of the cleanup to close out the wastewater permit, which I hope to do by the end of the week. Thanks Jay, talk soon!
